

HTML Cheat Sheet

Headers

```
<h1>I'm Big!</h1>
<h2>I'm Smaller But Still Big</h2>
<h3>I'm Kinda Big</h3>
<h4>I'm Sorta Just Bolder</h4>
<h5>I'm Not Used Much</h5>
```

Text

```
<p>I'm a paragraph of text! I love talking.
I'm a block element.</p>
```

```
<strong>wrap me around a word, phrase or
sentence and style me bold! I'm an inline
element</strong>
```

```
<em>I emphasize things. Style me italic. I'm
an inline element.</em>
```

```
<blockquote>Style me for quotes,
testimonials, etc. I'm a block element.</
blockquote>
```

```
<br>I'm a line break. Use me sparingly.
```

Links

```
<a href="some-page.html">I'm a link!</a>
```

```
<a href="some-page.html"
target="_blank">I open in a new tab</a>
```

Unordered (Bullet) List

```
<ul>
  <li>List Item One</li>
  <li>List Item Two</li>
  <li>List Item Three</li>
</ul>
```

Ordered (Numbered) List

```
<ol>
  <li>List Item One</li>
  <li>List Item Two</li>
  <li>List Item Three</li>
</ol>
```

Image

```

```

Boxes (Semantic div tags)

```
<div>I'm just a box</div>
```

```
<header>I'm still just a box but I'm a nice
place to put header html like your logo and
whatnot</header>
```

```
<nav>I'm also just a box but you should put
your nav html inside me.</nav>
```

```
<section>You guessed it! Still just a box,
great for "sectioning" out your page
content.</section>
```

```
<article>Get even more specific in your
sections by splitting up content into article
tags when it makes sense. Think news
page.</article>
```

```
<aside>Great for side content, like sidebars
etc. And yes, I'm still just a box.</aside>
```

```
<footer>Put footer stuff in me!</footer>
```

Remember: A div by any other name, is just a div.

```
<form>
  <legend>Name of the form</legend>
  <fieldset>
    <label>Name: <input type="text"></
label>
  </fieldset>
</form>
```

```
<!-- I'm an HTML comment --> (two dashes
each)
```
