CSS Cheat Sheet

HTML tags don't have any prefix characters:
h1 { }, img { }, div { }, a { }, etc

Classes start with a dot (.)
.class-name { }

IDs start with a hash (#)
#id-name { }

<u>Pseudo-classes</u> start with :
(or :: if they're a pseudo *element*)
a:hover { }
p::before { }

wildcard *
Applies to EVERYTHING. Use sparingly
* { }

Fonts
font-family: 'Helvetica', sans-serif;
font-size: 24px;
font-weight: 700; or font-weight: bold;
color: #999;
font-style: italic;
text-align: center; (left, right)

Color Examples
Hex: #ff0000;
RGB: rgb(255, 255, 255);
RGBA: rgba(242, 162, 34, 0.5);
The A stands for Alpha channel

A margin with 4 values in this order:
margin: top right bottom left;
Would be like this:
margin: 10px 20px 16px 12px;

Or specify a single value:
margin-top: 20px;

Same goes for padding
padding: top right bottom left;
Would be like this:
padding: 10px 20px 16px 12px;

Images
Do this as default. Your images should usually stretch to the width of their container.
width: 100%;
An image the entire height/width of the screen:
height: 100vh; or width: 100vw;
vw and vh stand for viewport width/height

Border
border: 1px solid #000;
Or specify a side:
border-bottom: 4px dashed #ff0000;

Backgrounds
background-color: #efefef;

background-image: url('../images/background.png');

This makes the image NOT tile:
Background-repeat: no-repeat;

This makes the image cover maximum real estate:
background-size: cover;

Centering a div:
div {
    width: 60%;
    margin: auto;
}

/* CSS Comment */

DON'T FORGET SEMI-COLONS and <u>validate your code</u>!
